

## Surface Well Testing

ETS provides a wide range of Well Testing and Production services to the E&P companies for upstream and downstream solution. Our innovative and down hole well testing services deliver accurate results that help you characterize your confidence in your well's ability to produce. "All equipment has been manufactured by leading international manufacturers."

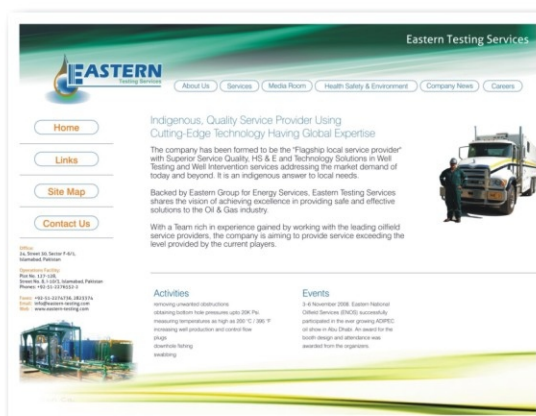

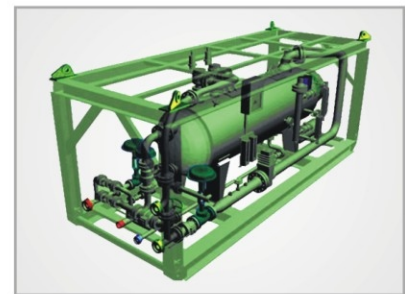

Tests on oil and gas wells are performed at various stages of well construction, completion and production. The test objectives at each stage range from simple identification of produced fluids and determination of reservoir deliverability to the characterization of complex reservoir features.

## Equipment

- Larger Vessels-Cab test up to 90 MMSCF/D
- All equipment is "HPHT" rated, and 'Sour service'
- Send filter % Heater available

ETS is introducing 'Wireless' data communication from the well head to the data cabin. Measurements include Well Head Pressure, Temperature and separator pressure, Temperature with liquid and gas flow rates.

## Real Time Data Transmission

The downhole and surface data can be transmitted to the customer office or any other remote location provided the client well site has high speed internet connectivity.

## Downhole Sampling

Compositional and PVT analysis of formation samples requires recovered samples conditions. Various downhole samples allow controlled uncontaminated sampling without flashing.
